

While set to True an additional purple line will be added in all subplots of the telecover test. In the first 3 subplots the line corresponds to the last sector (e.g. N2), while in the 4th subplot (deviations) it is the difference between the normalized signal of the last sector and the normalized mean signal of the corresponding sector e.g. $N2 - N$. Set to False to not visualize this line. Defaults to True.
